

ArcGIS Parcel Fabric Packages from MNC

Many organizations face unique challenges in land administration, including:

Inefficient and Error-Prone Data Maintenance

Traditional parcel management tools can be labour-intensive, requiring manual data entry, updates, and corrections, often leading to data inconsistencies, errors, and delays in processing land transactions.

Limited Analytical and Decision-Support Capabilities

Legacy tools often don't support advanced spatial analysis or are incompatible with modern GIS applications, limiting the ability of governments to make data-driven decisions or support complex land management workflows.

Data Compatibility and Data Migration

Legacy tools often lead to siloed data, with parcel information stored in separate systems or databases that don't communicate with each other, making it difficult to get a comprehensive, up-to-date view of land ownership and boundaries.

Cloud-Based Storage and Hosting

Scalable, secure, and accessible environments are needed for storing and managing geospatial data.

Inefficient Collaboration and Sharing

Legacy parcel management systems often lack the ability to easily share data and collaborate between different government departments, agencies, or stakeholders, leading to duplicated work and communication breakdowns.

Poor Data Quality and Inconsistent Standards

Inconsistent data standards and outdated data quality checks in older systems can lead to issues such as conflicting property boundaries, outdated parcel records, or data that doesn't meet standards.

Limited Scalability and Flexibility

Legacy systems are often built on outdated technologies that can't easily scale to handle large volumes of data or adapt to evolving business needs.

MNC understands the challenges of managing parcels in a dynamic, high-demand environment. Our Parcel Fabric Services help organizations like yours unlock efficient and accurate parcel management by leveraging the power of Esri's ArcGIS platform.

ArcGIS Parcel Fabric Packages

Parcel Fabric Set Up and Configuration

- Data Analysis
- Data Modelling
- Data Migration

Support Packages

- Term-based Support
- Parcel Fabric Maintenance
- Parcel Fabric Training

Add-ons

- Workflow optimization
- Reporting and Analytics

Our expert team will work closely with you to design, implement, and maintain a tailored parcel fabric solution that meets your unique needs and goals.
